■ Proper usage

◎ Differential frequency

When installing several proximity sensor closely, it may cause malfunction due to mutual interference. Therefore, please use differential frequency for the application
 ※Differential frequency type is only for 17 square.

◎ In case of the load current is small

● AC 2-wire type

110VAC : Min. 20kΩ 3W
 220VAC : Min. 39kΩ 10W

● DC 2-wire type

◎ Connection of the power supply

When using DC 2-wire and AC 2-wire type, a load must be connected before applying power; otherwise, components can be damaged.

It may cause return failure of load by residual voltage. If the load current is under 5mA, please make sure the residual voltage is less than the return voltage of the load by connecting a bleeder resistor in parallel with the load as shown in the diagram.

$$R = \frac{V_s}{I} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[I : Action current of load, R: Bleeder resistance, P: Permissible power]

Please make the current on proximity sensor smaller than the return current of load by connecting a Bleeder resistor in parallel.

※W value of Bleeder resistor should be bigger for proper heat dissipation.

$$R = \frac{V_s}{I_o - I_{off}} (\Omega) \quad P = \frac{V_s^2}{R} (W)$$

[Vs : Power supply, I_o : Min. action current of proximity sensor, I_{off} : Return current of load, P : Number of Bleeder resistance watt]

◎ Mutual-interference & Influence by surrounding metals

When several proximity sensors are mounted close to one another a malfunction of the may be caused due to mutual interference. Therefore, be sure to provide a minimum distance between the two sensors as below chart indicates.
